Internet Security Research Lab

*Cutting Edge Research in Authentication Systems*

**Research Positions Available**

**We’re Looking For**
- Undergraduate students
- New graduate students

**Current Projects**
- New authentication methods
- Anonymity systems
- Improved access control for wireless networks

The Internet Security Research Lab (ISRL) conducts world-class research in authentication systems. The primary goal of the lab is to generate research publications and software prototypes that advance the state-of-the-art. The lab strives to maintain a friendly, focused, and creative environment that enable lab members to reach their highest level of excellence.
